#### Response to Arguments

1. Applicant's arguments with respect to claims 1-18 have been considered but are moot in view of the new ground(s) of rejection.

### Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 15-18 are rejected under 35 U.S.C. 101 because the claim is directed to a recording medium storing nonfunctional descriptive material.

Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical "things" nor statutory processes. See, e.g. Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. See MPEP 2106.IV.B.1.

## Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Art Unit: 2621

4. Claims 8-14, 17-18, are rejected under 35 U.S.C. 102(e) as being anticipated by Miller et al.

Miller et al discloses a video recording/reproducing apparatus that shows all the limitations recited in claims 8, and 17, including the feature of the set top box for use with a monitor and the digital video recorder for storing program data received from the STB (See the companion box 140 having the memory 355 shown in Miller et al, wherein digital signals recording is performed, and further, see the television 120, and the STB 130, of Miller et al), the feature of the set top box for demodulating program data received over a communication channel (See Miller et al's Figure 2, component 320) the feature of the set top box including a DVR interface and the feature of the STB interface for communicating with the STB over the DVR interface as specified in the present claims 8, and 17 (See the STB 130 and the box 140 which includes the capability of communicating between the both of them through the IR receivers and transmitters shown thereof in Miller et al), the feature of receiving the plurality of program identifiers from the DVR and modifying at least one of the selected operation of the STB in response to the plurality of program identifiers as specified in the present claims 8, and 17. (See Miller et al's page 2, paragraph [0030], and further, see Miller et al's page 1, paragraph [0002], line 4-9).

With regard to claims 9-10, the feature of the plurality of program identifiers identify respective programs scheduled for recording by the DVR as specified thereof is present in Miller et al. (See Miller et al's page 3, paragraph [0032], lines 2-5, and page 5, paragraph [0045], lines 3-5).

Application/Control Number: 09/960,030

Art Unit: 2621

With regard to claim 11, the feature of the STB graphical user interface as specified thereof is present in Miller et al. (See Miller et al's Figures 4-5. where the tuned channel number by the STB can be displayed).

With regard to claim 12, the feature of displaying the Electronic Program Guide as specified thereof is present in Miller et al. (See Miller et al's page 2, paragraph [0029], line 11).

With regard to claim 13, the feature of demodulating the program data identified by the program identifiers as specified thereof is present in Miller et al. (See Miller et al's Figure 2, component 320).

With regard to claims 14, and 18, the feature of communicating to the DVR information identifying a program selected by a user as specified thereof would be present in Miller et al. (See Miller et al's page 1, paragraph [0002], line 4-9).

5. Claims 1-7 contain allowable subject matter over the prior art of record.

#### Conclusion

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bob Chevalier whose telephone number is 571-272-7374. The examiner can normally be reached on MM-F (9:00-6:30), second Monday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on 571-272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
